Study Guide – Lab Practical 1 (total = 26+10+16+13+16+69+9=159 terms)

Unit 1: Anatomical Terms (8+9+9=26 terms)

Vocabulary

Directional terms	**Body Regions**	
anterior	abdominal	nasal
posterior	axillary	oral
superior	brachial	orbital
inferior	carpal	patellar
proximal	cephalic	pedal
distal	cervical	scapular
superficial	cranial	sternal
deep	femoral	thoracic
	lumbar	vertebral

You should be able to

- Demonstrate and describe anatomical position
- Apply directional terms to description of body parts
- Describe the division of the major body cavities
- Describe anatomical planes of section
- Identify the organ systems, their functions, and the major organs in each system

---

Unit 4: Cytology (10 terms)

Vocabulary

diffusion
osmosis
tonicity
cell cycle
interphase
mitosis
prophase
metaphase
anaphase
telophase

You should be able to

- Describe the processes of diffusion and osmosis
- Describe the effects of hypotonic, isotonic, and hypertonic environments on cells
- Identify the stages of the cell cycle and mitosis

Unit 5: Histology (8+8=16 terms)

Vocabulary

- extracellular matrix
- blood
- bone
- cartilage
- collagen fiber
- columnar cell
- cuboidal cell
- dense connective tissue
- elastic fiber
- ground substance
- loose connective tissue
- neuron
- reticular fiber
- simple epithelial tissue
- squamous cell
- stratified epithelial tissue

You should be able to

- Describe the 4 primary tissue types
- Identify epithelial tissues by number of layers and cell shape
- Identify and describe connective tissues
- Relate tissue structure to tissue function

Unit 6: Integument (8+7 = 13 terms)

Vocabulary

- arrector pili muscle
- dermal papillae
- dermis
- epidermis
- hair follicle
- hypodermis
- sebaceous gland
- stratum basale
- stratum corneum
- stratum granulosum
- stratum lucidum
- stratum spinosum
- sweat gland

You should be able to:

- Identify major structures of the integumentary system
- Describe the gross and microscopic structures of skin

Unit 7: Intro to Skeletal System (8+8 = 16 terms)

Vocabulary

compact bone	lacunae
bone marrow	lamellae
canaliculi	medullary cavity
central canal	osteocyte
diaphysis	osteon
endosteum	perforating canal
epiphyseal plate/line	periosteum
epiphysis	spongy bone

You should be able to:

- Identify the structures and components of osseous tissue
- Identify the parts of the long bone

Unit 8: Skeletal System (vocabulary in separate bone list with 69 terms)

You should be able to:

- Identify bone and markings of the axial skeleton (see bone list)
- Identify bones and marking of the appendicular skeleton (see bone list)

Unit 9: Articulations (9 terms)

Vocabulary

anterior cruciate ligament (ACL)
cartilaginous joints
fibrous joints
ligaments
posterior cruciate ligament (PCL)
synovial fluid
synovial joints
synovial membrane
tendons

You should be able to

- Classify joints based on structure and function
- Identify structures of the knee joint
